

## **SKIN ANALYSIS: WHAT IS IT?**

When it comes to knowing skin, the anatomy, structure, function, limitations and what works best for enhancing the skin, a dermatology team is essential.

Trained registered dermatology nurses assess your skin type and the amount of sun damage your skin has sustained. They will make recommendations for your skin rejuvenation and maintenance to meet realistic expectations. A skin care regime, specific to your needs, using medical grade skin care products, will be developed in conjunction with a programme of treatments.

A skin analysis is not a skin cancer check.
